PROFESSIONAL SUMMARY

Senior QA & Automation Engineer with 5+ years of combined software engineering and quality assurance experience, specializing in manual and automated testing for web, mobile, and API-driven applications. Experienced in building and maintaining automation frameworks using Selenium, Playwright, Java, TestNG, and Cucumber, with hands-on API testing using Postman and RestAssured and CI/CD integration through Jenkins. Proven track record of supporting large-scale migration initiatives, cross-functional delivery, and production-focused quality assurance with zero customer-impact incidents across major migrations. Strong background in test strategy, regression optimization, defect analysis, mentoring, and rapid adoption of unfamiliar products and domains. Brings additional frontend engineering experience, enabling strong understanding of UI architecture, user journeys, and end-to-end product quality.

PROFESSIONAL EXPERIENCE

Senior QA & Automation Engineer

Apr 2025 – Present

Vodafone Egypt

- Lead QA activities across multiple squads and product areas, defining test approaches, coordinating validation activities, and aligning quality practices with delivery objectives.
- Designed and maintained automation frameworks using Selenium, Java, TestNG, Maven, and supporting utilities, increasing automated regression coverage by approximately **35%** across supported products.
- Optimized regression execution and test-suite selection, reducing regression validation time by approximately **30%** while maintaining critical functional coverage.
- Supported large-scale product and platform migration initiatives, performing end-to-end manual validation across critical customer journeys and contributing to **100% customer-impact-free deliveries** across supported migrations.
- Executed comprehensive testing across web, mobile, API, and integrated backend flows, identifying high-impact defects before production and supporting stable releases.
- Developed and executed API test scenarios using Postman and RestAssured, covering positive, negative, boundary, authentication, and response-validation scenarios.
- Integrated automated test execution into CI/CD workflows through Jenkins, improving test feedback visibility and enabling earlier detection of regression failures.
- Took ownership of QA support across tribes/product areas on short notice, rapidly analyzing unfamiliar business flows, systems, and dependencies and establishing an effective testing strategy with minimal onboarding time.
- Supported cross-team delivery by collaborating closely with developers, DevOps, Product Owners, UX/UI, and other QA teams during planning, implementation, defect triage, and release validation.
- Mentored junior QA engineers, reviewed automation implementations, and promoted reusable automation and consistent testing practices across the team.
- Managed the full defect lifecycle through Jira, including root-cause investigation, severity assessment, retesting, regression impact analysis, and release reporting.
- Participated in sprint planning, backlog refinement, design discussions, retrospectives, and release readiness activities, contributing QA input early in the development lifecycle.
- Led early adoption and evaluation of GitHub Copilot Enterprise, researching potential engineering and productivity benefits, supporting team onboarding, and providing practical feedback on responsible usage within QA workflows.

QA & Automation Engineer

Feb 2024 – Apr 2025

Vodafone Egypt

- Designed and executed manual and automated test cases for customer-facing web applications and critical business journeys.
- Automated functional and regression scenarios using Selenium, Java, TestNG, and Maven, contributing to increased regression coverage and reduced repetitive manual validation.
- Developed reusable automation components and utilities to improve maintainability and accelerate creation of new test scenarios.
- Performed API validation using Postman and supported integration of API testing into broader end-to-end validation flows.
- Supported major feature releases and migration initiatives through test planning, execution, defect investigation, regression testing, and release validation.

- Contributed to CI/CD test execution through Jenkins and analyzed automated execution results to identify failures and product defects.
- Collaborated with developers, product stakeholders, and QA teams to clarify requirements, identify edge cases, and ensure effective end-to-end coverage.

QA Engineer

Aug 2023 – Jan 2024

Enable Tech

- Designed and executed functional and regression test cases for software applications.
- Performed API automation testing using ShaftEngine, validating service behavior and integration scenarios.
- Investigated, reproduced, and documented defects with clear technical evidence and business impact.
- Collaborated with development teams during defect resolution, retesting, and release validation.

Frontend Developer

Mar 2022 – Jun 2023

Digihive Solutions

- Converted Figma designs into responsive web applications using HTML, SASS, and JavaScript.
- Built reusable frontend components and maintained scalable UI architecture across multiple web applications.
- Collaborated with designers and stakeholders to implement UI/UX solutions and translate business requirements into working interfaces.
- Optimized performance, SEO, responsiveness, and cross-browser compatibility.
- Developed strong understanding of DOM behavior, browser rendering, responsive layouts, and frontend application architecture, later supporting a transition into software quality engineering.

Frontend Developer (Freelance)

Oct 2022 – Jul 2023

Caian Tech

- Developed responsive web interfaces for multiple platforms using modern JavaScript technologies.
- Worked independently with stakeholders to understand requirements, implement solutions, and deliver production-ready UI components.

RPA Developer

Nov 2021 – Mar 2022

Metra

- Assisted in developing business automation solutions using UiPath and ASP.NET.
- Automated repetitive business processes to improve operational efficiency and reduce manual effort.
- Collaborated with technical teams to analyze business processes and translate requirements into automation workflows.

TECHNICAL SKILLS

- | | |
|--|---|
| • Automation: Selenium, Playwright, Appium | Actions |
| • Languages: Java, JavaScript | • Reporting: Allure, Extent Reports |
| • Testing: Manual, Functional, Regression, Integration, E2E | • Version Control: Git, GitHub, GitLab |
| • API: Postman, RestAssured, ShaftEngine | • Containers: Docker |
| • Frameworks: TestNG, Cucumber, Maven | • Database: Oracle SQL |
| • CI/CD: Jenkins, Pipeline Integration, Github/Gitlab | • Defect Management: Jira |
| | • Practices: Agile, Scrum, Test Strategy |

EDUCATION

Bachelor of Software Engineering (Very Good)

Helwan University

2017 – 2021

CERTIFICATIONS

- ISTQB Certified Tester Foundation Level (CTFL)

LANGUAGES

- Arabic (Native)
- English (Professional)
- German (Basic)
